

4. Objectives

5. Dataset Description

6. Methodology

This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations.

7. Data Cleaning

8. Feature Engineering

This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations.

12. Streamlit Dashboard

13. Business Insights

14. Recommendations

This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations.

15. Future Scope

16. Conclusion

This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations. This section explains the analytical workflow, implementation decisions, data interpretation, visualization findings, and operational recommendations. It emphasizes reproducible analysis, capacity utilization measurement, congestion detection, and decision support for ferry operations.
